(Artificial Intelligence and Machine Learning)
Deogiri Institute of Engineering and Management Studies,

Aurangabad

(2023- 2024)

CERTIFICATE

This is to certify that, the Mini Application entitled "**Next Word Prediction**" submitted by **Sumit Dobhal (AI3146), Pranav Vyavahare (AI3152) Sharayu Iralepatil (AI3158),** is a bonafide work completed under my supervision and guidance in partial fulfillment for award of Bachelor of Technology CSE (AI&ML) Degree of Dr. Babasaheb Ambedkar Technological University, Lonere.

Place: Aurangabad

Date:

Dr. Sugandha Nandedkar   **Dr. S. A. Shaikh**

Guide   **H. O. D.**

Director,

Deogiri Institute of Engineering and Management Studies,

Aurangabad

DECLARATION

       This is to certify that, the partial project report entitled, "**Next Word Prediction**" Submitted by **Sumit Dobhal (AI3146), Pranav Vyavahare (AI3152), Sharayu Iralepatil (AI3158)** is a bonafide work completed under my supervision and guidance in partial fulfillment for award of Bachelor degree in CSE (AI&ML) of Deogiri Institute of Engineering and Management Studies, Aurangabad under Dr. Babasaheb Ambedkar Technological University, Lonere.

Place: Aurangabad

Date:

Guide: Dr Sugandha Nandedkar

List of Abbreviation

Sr. No	Acronym	Abbreviation
1.	BERT	Bidirectional Encoder Representations from Transformers
2.	DL	Deep Learning
3.	ML	Machine Learning
4.	LSTM	Long Short-Term Memory
5.	GRU	Gated Recurrent Unit
6.	NLP	Natural Language Processing
7.	RNN	Recurrent Neural Network
8.	ReLU	Rectified Linear Unit
9.	RMSE	Root Mean Squared Error
10.	Seq2Seq	Sequence-to-Sequence

Abstract

The Next Word Prediction project aims to develop a sophisticated model that can accurately predict the subsequent word in a given text sequence. Utilizing advanced Natural Language Processing (NLP) techniques and deep learning architectures such as Long Short-Term Memory (LSTM) networks, the project seeks to enhance text entry efficiency and user experience in digital communication platforms.

The project encompasses the collection and preprocessing of large text corpora to train the predictive model. By implementing language modeling and machine learning algorithms, the model learns patterns and dependencies within the language data. The core of the project lies in the ability of the LSTM network to remember long-term dependencies, making it particularly suited for the sequential nature of language.

The predictive model operates by analysing the context provided by the preceding words and generating probabilities for the next word. This process not only speeds up text entry but also aids in error correction and assists users with limited typing abilities.

The anticipated outcome of the project is a robust and efficient next word prediction system that can be integrated into various applications, providing a seamless and intuitive typing experience. The project's success will be measured by the accuracy of the predictions and the system's adaptability to different languages and contexts.

This abstract provides a concise overview of the project's objectives, methodology, and expected outcomes. It highlights the use of NLP and LSTM networks in creating a model that improves text entry and assists users in digital communication.
